Albaraa Mohammed Yehia Seddik

AI Automation Developer | n8n, LLM Agents, RAG Systems

Cairo, Egypt | 01070211412 | albaraamohammed225@gmail.com | LinkedIn: linkedin.com/in/albaraa-mohammed-yehia

PROFESSIONAL SUMMARY

AI Automation Developer who builds intelligent workflows, conversational AI agents and automated data pipelines with n8n and LLM integrations. Designs retrieval-augmented generation (RAG) systems on vector databases, and multi-tool AI agents connected to Telegram, Google Sheets, Gmail and Supabase. Focused on turning manual business processes into reliable, AI-driven automation.

CORE COMPETENCIES

n8n Workflow Automation | AI Agents | RAG Systems | Vector Databases | LLM Orchestration | Prompt Engineering | Conversational AI | Telegram Bot Integration | Webhooks & REST APIs | Document Processing | Data Pipelines | Business Process Automation

TECHNICAL SKILLS

- **AI & LLM:** Large Language Models (OpenRouter, Google Gemini), AI Agents, Retrieval-Augmented Generation (RAG), Vector Databases (Supabase Vector Store), Embeddings, Prompt Engineering, Structured Output Parsers
- **Automation Platform:** n8n (Workflow Automation, Advanced Triggers, Webhooks, Conditional Branching, Subworkflows)
- **Databases & Storage:** Google Sheets, Supabase, Data Loaders, Recursive Character Text Splitters
- **Integrations & APIs:** Telegram Bot API, Google Drive API, Gmail API, REST APIs
- **Programming:** JavaScript (custom n8n Code nodes)

PROJECTS

Intelligent Document Processing & RAG Pipeline

n8n, LlamaParse, Supabase Vector Store, Google Gemini, Telegram API

- Designed an end-to-end pipeline that ingests documents automatically through a Google Drive trigger and answers questions about them.
- Integrated the LlamaParse platform and custom JavaScript Code nodes to extract and parse complex multi-page documents.
- Implemented a Supabase Vector Store with Google Gemini embeddings for semantic search and conversational retrieval through Telegram.
- Removed manual document handling: new files are parsed, embedded and made searchable for Q&A without any human step.

Multi-Functional Restaurant AI Assistant & Order Management System

n8n, OpenRouter LLM, Telegram Bot, Google Sheets

- Developed a Telegram conversational agent that handles customer support and automated order processing.
- Classified user intent with Basic LLM Chains, Structured Output Parsers and Switch nodes, and routed each message to the right workflow.
- Automated backend operations with Google Sheets tools (read, write, update, cancel orders) for real-time order tracking.
- Combined customer support and order management in one assistant, so customers get answers and order updates in the same chat.

Automated Course Registration & Categorization Workflow

n8n, Google Sheets Trigger, Gmail API, Conditional Routing

- Built an administrative pipeline that processes student course sign-ups instantly from a Google Sheets trigger.
- Applied rule-based Switch nodes to route entries into educational pathways (AI courses and Data Analysis courses).
- Automated approval-status logging and sent personalized Gmail notifications after each successful registration.
- Replaced manual sorting of sign-ups with automatic categorization, approval logging and confirmation emails.

Real Estate Sales Lead Management Automation

n8n, Telegram Bot, AI Agent, Supabase, Google Sheets

- Created an automated lead capture and qualification system for real estate sales through instant messaging.
- Integrated an AI Agent with a custom property knowledge base and persistent conversation memory.
- Synced qualified client data and updates to Google Sheets and sent tailored responses to each lead automatically.
- Kept the sales team's Google Sheets current while giving every lead an instant, personalized reply.

EDUCATION & TRAINING

Digital Egypt Pioneers Initiative (DEPI), Round 5

Generative AI & Automation Training Program (Technical Track via AMIT Learning; Non-Technical Track via Novamind)

- Trained in advanced n8n workflow architecture, multi-agent system setup and vector database integration.
- Gained practical experience in webhook management, LLM orchestration and enterprise business process automation.

Beni-Suef National University, Egypt

Department of Artificial Intelligence | Expected graduation: 2028
